

Blue Bits: DigiCert Valimail DMARC Essentials partner playbook

Partner ID 82997420 · Công ty Cổ phần Chứng Thực Số Toàn Cầu Việt Nam (Bluebits) ·
<https://bluebit.vn/>

The product

DigiCert Valimail DMARC Essentials is a product Blue Bits resells and lists in its own website catalog. It automates SPF, DKIM and DMARC for each customer domain and takes it to enforcement, with dashboards, reports and BIML support included.

Strategy: Attach, Enforce, Brand

Sell DMARC Essentials as an **attach product** at every point where customers already buy from Blue Bits, move each customer to **enforcement**, then upsell a **brand** certificate (VMC or CMC). No new tools or projects are needed.

Positioning statement

For every business that sends email from its own domain, DigiCert Valimail DMARC Essentials is the automated email-authentication product that stops spoofing and meets Gmail, Yahoo and Microsoft sender requirements, sold by Blue Bits alongside the domain, email and SSL products customers already buy.

Message for Blue Bits: "Stop spoofing across every domain you manage."

Blue Bits serves enterprise and government accounts, which are prime impersonation targets. DigiCert Valimail DMARC Essentials sits in the Email Trust portfolio next to VMC, S/MIME and SSL. Portfolios, Teams, role-based access and SAML/SSO suit large, multi-domain customers, and every customer that reaches enforcement is a ready VMC or CMC sale.

Where to attach DMARC Essentials

Point of sale	How to use it
Email Trust customers	Add DMARC Essentials to every VMC and S/MIME conversation; it is the step that makes a VMC possible.

SSL and code-signing renewals	Offer it at renewal to enterprise and government accounts that already trust Blue Bits.
Multi-domain groups	Portfolios, Teams and role-based access suit banks, ministries and large brands with many domains.
Automation projects	When Keytalk or certificate automation touches a customer's DNS, add DMARC in the same project.

Who needs it (use in every conversation)

- You send invoices, quotes or payment details by email
- You use Google Workspace, Microsoft 365 or an email marketing platform
- Some of your emails land in spam or never arrive
- You own more than one domain, including unused or parked ones
- You want your brand logo to appear next to your emails

Key benefits for your customers

- **Stop domain spoofing:** Block phishing and fake invoices sent in your name.
- **Meet sender requirements:** Pass the SPF, DKIM and DMARC checks Gmail, Yahoo and Microsoft require.
- **Improve deliverability:** Help your legitimate email reach the inbox instead of spam.
- **Reach enforcement safely:** Automation and clear reports move you to p=reject without blocking real mail.
- **No DNS expertise needed:** Instant SPF, automated DKIM and automated DMARC do the heavy lifting.
- **Logo-ready inbox:** Enforcement plus BIMI support prepares you for a VMC or CMC.

Complete feature set (Partner Version)

Area	Included features
Automated authentication Set up SPF, DKIM and DMARC correctly without DNS expertise.	• Instant SPF with unlimited DNS lookups (no 10-lookup limit) • Automated DKIM • Automated DMARC • Subdomain configuration

Visibility into every sender See exactly who is sending email as your domain.	- Account overview: email sources, deliverability, top senders and top sending domains - Authentication failure rate - Domain Executive Report: domain, email and sender insights, SPF lookup and suspicious mail, downloadable as PDF
Spoofing and threat detection Spot impersonation attempts before they hurt your brand.	- Suspicious mail by source - Top impacted domains - Trends over time
Domain management Manage every domain and subdomain from one list.	- DMARC record, policy and enforcement status per domain - Sending status, subdomains and available reports - CSV export
Reports and compliance Prove you meet mailbox-provider sender rules.	- Sender Requirements Failure report (Gmail, Yahoo and Microsoft rules) - Email Analyzer and Email Delivery reports - Domains, Enforcement Status and Event Log reports
BIMI and logo ready Get ready to show your brand logo in the inbox.	- BIMI eligible - BIMI Amplify with your own VMC or CMC (bring your own certificate) - BIMI Simulator, Audience Insights and Inspiration
Security, access and support Enterprise-grade controls and expert help for any size team.	- SOC 2 Type 2 certified, user-level MFA and SAML/SSO - Unlimited users, role-based access control and API keys 180 days of data history, Teams, Portfolios, alerts and notification center - Onboarding assistance, dedicated account manager, technical account manager and knowledge base

Product ladder

Step	Product	Who gets it
1. Lead product	DigiCert Valimail DMARC Essentials	Every customer domain that sends email
2. Outcome	DMARC enforcement, reached safely with automation and reports	Customers on Essentials
3. Upsell	DigiCert VMC (registered trademark) or CMC (no trademark needed), used with BIMI Amplify	Customers at enforcement who want their logo in the inbox

Why customers need it now

- Gmail and Yahoo have required SPF, DKIM and DMARC from bulk senders since 2024; Microsoft followed in 2025.
- Domains without DMARC enforcement can be spoofed to phish customers, staff and suppliers.
- Most small and mid-size business domains have no DMARC record, or one that only monitors.

Handling objections

Objection	Response
"We are busy selling automation."	DMARC is an attach product, not a new project: add it to orders, renewals and automation setups you already run. The DNS work happens in the same customer visit.
"Our customers don't know what DMARC is."	Lead with the problem they do know: emails landing in spam and scam emails sent in their name. DMARC Essentials is the answer.
"Will it break customers' email?"	Essentials identifies every legitimate sender first and moves to enforcement step by step, with clear enforcement-status reporting.
"Small customers can't manage DNS records."	Instant SPF, automated DKIM and automated DMARC remove the DNS expertise, and onboarding assistance helps them connect.
"Where is the bigger deal?"	Every customer that reaches enforcement is ready for a DigiCert VMC or CMC, using BIMl Amplify in Essentials.

90-day launch plan

Phase	Actions
Days 1-30: List and attach	Publish the DMARC Essentials product page; add it to checkout, renewal reminders and email-hosting pages; brief sales and support with the sales sheet.
Days 31-60: Campaign	Send the four-email campaign to existing domain, email and SSL customers; use the attach copy in invoices, signatures and support replies.
Days 61-90: Enforce and upsell	Follow up customers moving to enforcement; offer VMC or CMC with BIMl Amplify; review results and repeat the campaign for new customers.

Launch checklist

1. Add DigiCert Valimail DMARC Essentials as a product page on bluebit.vn (folder 2).
2. Share the two-page sales sheet (file 1) with sales and existing accounts.
3. List DMARC Essentials under Email Trust on bluebit.vn and send the campaign to enterprise and government accounts first.

4. Load the email campaign (file 3) into your email platform; send email 4 only to enforced domains.
5. Add the attach copy (file 4) to checkout, renewal reminders, invoices, support replies and chat.
6. Use "Order DMARC Essentials" and "Talk to sales" as the calls to action.

What to measure

- Partners with DMARC Essentials live on their website
- Attach rate on domain, email-hosting and SSL orders
- Domains activated on DMARC Essentials
- Share of activated domains reaching enforcement
- VMC and CMC orders from enforced domains

What we used from your website

- National representative of GMO GlobalSign in Vietnam
- Official DigiCert reseller
- GlobalSign Top Sales APAC 2025
- Trusted by banks, ministries and major brands

DigiCert Valimail DMARC Essentials is sold by Blue Bits.
