

Stop attackers sending email as your organization.

DigiCert Valimail DMARC Essentials is now part of the Blue Bits Email Trust portfolio. It automates SPF, DKIM and DMARC and takes every domain you own to full enforcement.

Why now: Gmail and Yahoo have required SPF, DKIM and DMARC from bulk senders since 2024, and Microsoft followed in 2025. Unauthenticated email is increasingly sent to spam or rejected, and domains without DMARC enforcement can be spoofed.

Key benefits

Stop domain spoofing

Block phishing and fake invoices sent in your name.

Meet sender requirements

Pass the SPF, DKIM and DMARC checks Gmail, Yahoo and Microsoft require.

Improve deliverability

Help your legitimate email reach the inbox instead of spam.

Reach enforcement safely

Automation and clear reports move you to p=reject without blocking real mail.

No DNS expertise needed

Instant SPF, automated DKIM and automated DMARC do the heavy lifting.

Logo-ready inbox

Enforcement plus BIMl support prepares you for a VMC or CMC.

How to get started

01

Order DMARC Essentials from Blue Bits

02

Activate and connect your domain, with onboarding help

03

Essentials automates SPF, DKIM and DMARC

04

Reach enforcement and track it in your dashboard

You need it if: you send invoices, quotes or payment details by email; you use Google Workspace, Microsoft 365 or an email marketing platform; some of your emails land in spam or never arrive; you own more than one domain, including unused or parked ones; you want your brand logo to appear next to your emails.

NEXT STEP AFTER ENFORCEMENT

Show your logo next to every email with a VMC or CMC.

Essentials is BIMl eligible with BIMl Amplify for your own certificate. VMC suits registered trademarks and adds Gmail's verified checkmark; CMC suits logos without a trademark.

DigiCert Valimail
DMARC Essentials

Everything included in DMARC Essentials

The complete feature set of DigiCert Valimail DMARC Essentials, available from Blue Bits.

Automated authentication

Set up SPF, DKIM and DMARC correctly without DNS expertise.

- Instant SPF with unlimited DNS lookups (no 10-lookup limit)
- Automated DKIM
- Automated DMARC
- Subdomain configuration

Visibility into every sender

See exactly who is sending email as your domain.

- Account overview: email sources, deliverability, top senders and top sending domains
- Authentication failure rate
- Domain Executive Report: domain, email and sender insights, SPF lookup and suspicious mail, downloadable as PDF

Spoofing and threat detection

Spot impersonation attempts before they hurt your brand.

- Suspicious mail by source
- Top impacted domains
- Trends over time

Domain management

Manage every domain and subdomain from one list.

- DMARC record, policy and enforcement status per domain
- Sending status, subdomains and available reports
- CSV export

Reports and compliance

Prove you meet mailbox-provider sender rules.

- Sender Requirements Failure report (Gmail, Yahoo and Microsoft rules)
- Email Analyzer and Email Delivery reports
- Domains, Enforcement Status and Event Log reports

BIMI and logo ready

Get ready to show your brand logo in the inbox.

- BIMI eligible
- BIMI Amplify with your own VMC or CMC (bring your own certificate)
- BIMI Simulator, Audience Insights and Inspiration

Security, access and support

Enterprise-grade controls and expert help for any size team.

- SOC 2 Type 2 certified, user-level MFA and SAML/SSO
- Unlimited users, role-based access control and API keys
- 180 days of data history, Teams, Portfolios, alerts and notification center
- Onboarding assistance, dedicated account manager, technical account manager and knowledge base
