

Go-to-market strategy: Attach, Enforce, Brand

Goal: make DigiCert Valimail DMARC Essentials a standard product in every partner's catalog, sold wherever customers already buy domains, email and SSL, and use it as the path to DigiCert VMC and CMC.

Positioning statement

For every business that sends email from its own domain, DigiCert Valimail DMARC Essentials is the automated email-authentication product that stops spoofing and meets Gmail, Yahoo and Microsoft sender requirements, sold by the partner alongside the domain, email and SSL products customers already buy.

Why now

- Gmail and Yahoo have required SPF, DKIM and DMARC from bulk senders since 2024, and Microsoft followed in 2025. Mail that fails is sent to spam or rejected.
- Domains without DMARC at enforcement can be spoofed to phish customers, staff and suppliers.
- Most small and mid-size business domains have no DMARC record, or one that only monitors.

The strategy in three stages

1. Attach

Sell DMARC Essentials at checkout, renewal, email-hosting setup, support conversations and automation projects.

2. Enforce

Instant SPF, automated DKIM and automated DMARC move each domain safely to enforcement, with reports that prove it.

3. Brand

Enforced domains are ready for a DigiCert VMC or CMC through BIMi Amplify, a higher-value follow-on sale.

Why it works for partners

- **Low effort:** a ready-made product page, sales sheet, email campaign and attach copy; partners publish and paste.
- **Fits existing work:** DMARC and certificate automation both touch the customer's DNS, so they can be sold together.
- **Built-in urgency:** mailbox-provider rules, spam problems and scam emails do the selling.
- **Built-in upsell:** every enforced domain is a VMC or CMC opportunity.

Where to attach DMARC Essentials

Point of sale	How to use it
Domain registration and renewal	Offer DMARC Essentials at checkout and in renewal reminders.
Email hosting	Every mailbox needs SPF, DKIM and DMARC to reach Gmail, Yahoo and Microsoft inboxes.
SSL and trust products	Pair website security with email security in the same order or renewal.
Support and account conversations	Offer it whenever a customer reports spam problems or scam emails.
Automation projects	When certificate automation touches a customer's DNS, add DMARC in the same step.

Who needs it

- You send invoices, quotes or payment details by email
- You use Google Workspace, Microsoft 365 or an email marketing platform
- Some of your emails land in spam or never arrive
- You own more than one domain, including unused or parked ones
- You want your brand logo to appear next to your emails

Key customer benefits

- **Stop domain spoofing:** Block phishing and fake invoices sent in your name.
- **Meet sender requirements:** Pass the SPF, DKIM and DMARC checks Gmail, Yahoo and Microsoft require.
- **Improve deliverability:** Help your legitimate email reach the inbox instead of spam.
- **Reach enforcement safely:** Automation and clear reports move you to p=reject without blocking real mail.
- **No DNS expertise needed:** Instant SPF, automated DKIM and automated DMARC do the heavy lifting.
- **Logo-ready inbox:** Enforcement plus BIMI support prepares you for a VMC or CMC.

Complete feature set (Partner Version)

Area	Included features
Automated authentication Set up SPF, DKIM and DMARC correctly without DNS expertise.	• Instant SPF with unlimited DNS lookups (no 10-lookup limit) • Automated DKIM • Automated DMARC • Subdomain configuration

Visibility into every sender See exactly who is sending email as your domain.	- Account overview: email sources, deliverability, top senders and top sending domains - Authentication failure rate - Domain Executive Report: domain, email and sender insights, SPF lookup and suspicious mail, downloadable as PDF
Spoofing and threat detection Spot impersonation attempts before they hurt your brand.	- Suspicious mail by source - Top impacted domains - Trends over time
Domain management Manage every domain and subdomain from one list.	- DMARC record, policy and enforcement status per domain - Sending status, subdomains and available reports - CSV export
Reports and compliance Prove you meet mailbox-provider sender rules.	- Sender Requirements Failure report (Gmail, Yahoo and Microsoft rules) - Email Analyzer and Email Delivery reports - Domains, Enforcement Status and Event Log reports
BIMI and logo ready Get ready to show your brand logo in the inbox.	- BIMI eligible - BIMI Amplify with your own VMC or CMC (bring your own certificate) - BIMI Simulator, Audience Insights and Inspiration
Security, access and support Enterprise-grade controls and expert help for any size team.	- SOC 2 Type 2 certified, user-level MFA and SAML/SSO - Unlimited users, role-based access control and API keys 180 days of data history, Teams, Portfolios, alerts and notification center - Onboarding assistance, dedicated account manager, technical account manager and knowledge base

Product ladder

Step	Product	Who gets it
1. Lead product	DigiCert Valimail DMARC Essentials	Every customer domain that sends email
2. Outcome	DMARC enforcement, reached safely with automation and reports	Customers on Essentials
3. Upsell	DigiCert VMC (registered trademark) or CMC (no trademark needed), used with BIMI Amplify	Customers at enforcement who want their logo in the inbox

Handling common objections

Objection	Response
-----------	----------

"We are busy selling automation."	DMARC is an attach product, not a new project: add it to orders, renewals and automation setups you already run. The DNS work happens in the same customer visit.
"Our customers don't know what DMARC is."	Lead with the problem they do know: emails landing in spam and scam emails sent in their name. DMARC Essentials is the answer.
"Will it break customers' email?"	Essentials identifies every legitimate sender first and moves to enforcement step by step, with clear enforcement-status reporting.
"Small customers can't manage DNS records."	Instant SPF, automated DKIM and automated DMARC remove the DNS expertise, and onboarding assistance helps them connect.
"Where is the bigger deal?"	Every customer that reaches enforcement is ready for a DigiCert VMC or CMC, using BIMi Amplify in Essentials.

90-day launch plan

Phase	Actions
Days 1-30: List and attach	Publish the DMARC Essentials product page; add it to checkout, renewal reminders and email-hosting pages; brief sales and support with the sales sheet.
Days 31-60: Campaign	Send the four-email campaign to existing domain, email and SSL customers; use the attach copy in invoices, signatures and support replies.
Days 61-90: Enforce and upsell	Follow up customers moving to enforcement; offer VMC or CMC with BIMi Amplify; review results and repeat the campaign for new customers.

What partners receive

- Partner playbook with positioning, attach points, features and a launch plan
- Two-page sales sheet in the partner's own branding
- Website product page ready to publish
- Four-email customer campaign, including a VMC/CMC upsell for enforced domains
- Attach copy for checkout, renewals, invoices, welcome emails, support replies and chat

How success is measured

- DMARC Essentials live on the partner website
- Attach rate on domain, email-hosting and SSL orders
- Customer domains activated on DMARC Essentials
- Share of activated domains reaching enforcement
- VMC and CMC orders from enforced domains
